

Kronos

Enrique Tejeda and Reily Stanford

UT-Martin

October 13, 2022

Motivation

- Paranaautical Activity - A roguelike FPS with a low-poly art style

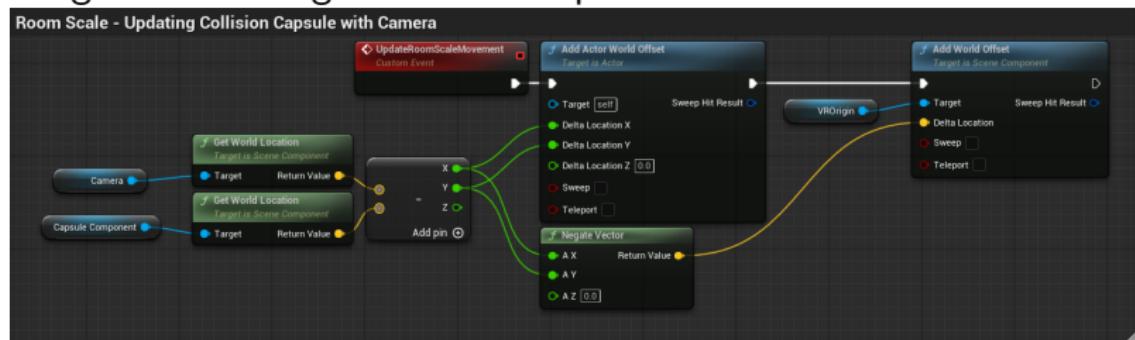

- Experimentation with VR technologies
- Learning game design elements with Unreal Engine

Story

- Someone has broken the rules of time
- Timeline is scrambled, up to Kronos to repair it
- Kronos manipulates time to assist in restoring time

Technology

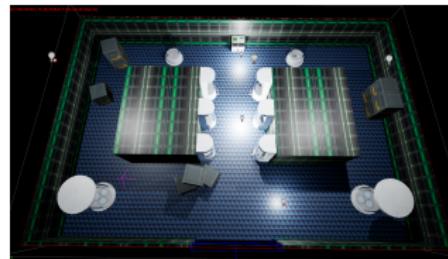

- Created using Unreal Engine 5
- Programmed using Unreal's Blueprints

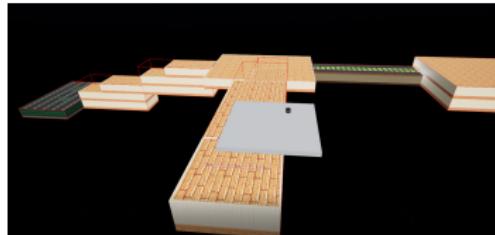

- Procedural Dungeon Plugin by BenPyton

Procedural Generation

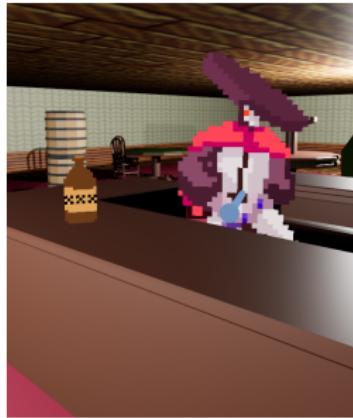

- The dungeon itself is built using room layouts

- The room layouts are procedurally connected to provide a fluid start to finish dungeon

2D/3D Mashup

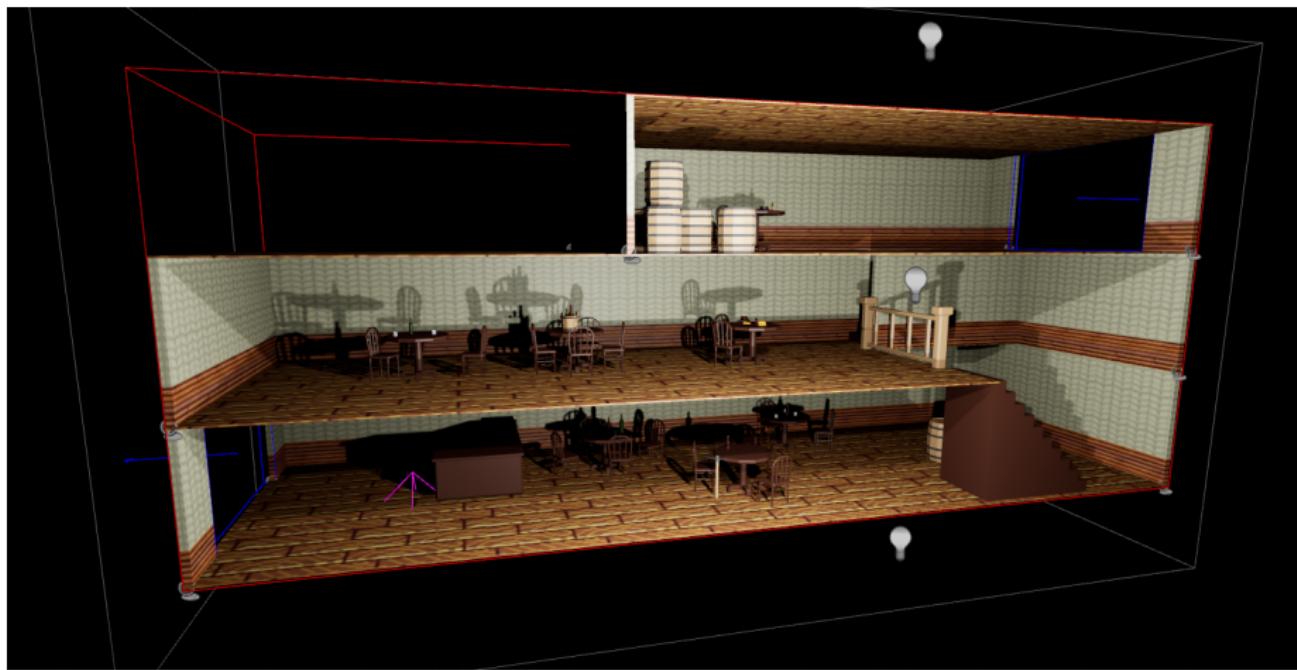

- The world is crafted using 3D elements
- The enemies and items are represented as 2D sprites to capture the feel of early game designs like Doom (1993)

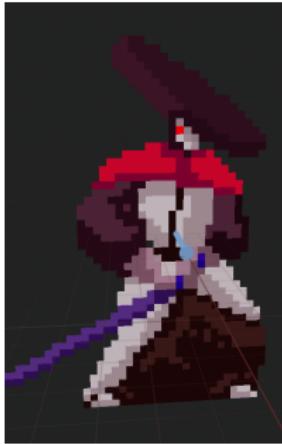

Gameplay

- Kronos is a VR FPS roguelike
- Each level is a different time period
- Enemies and bosses will reflect the era of the level
- Kronos is able to bring weapons across levels

Demonstration

Trials and Tribulations

- Locomotion Movement Implementation
- Sprite Changing with the Different Actions
- Understanding the Dungeon Creation Plugin with the Documentation Provided

Future Work

- Creating more room layouts and floors
- AI creation and management using Behavior Trees
- More enemies and bosses
